

CE706 - Information Retrieval

2005569

Introduction:

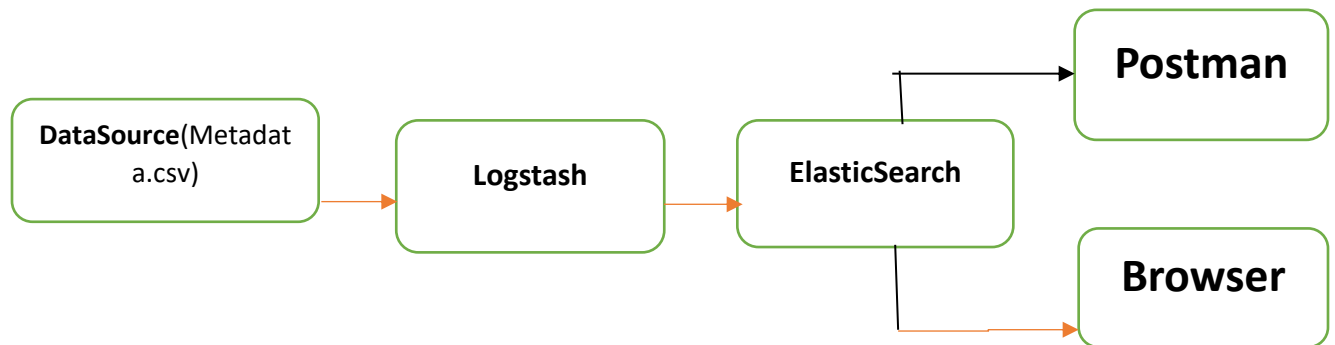

COVID-19 is an infectious disease impacting all over the world. Clinicians and researchers continuously are searching for reliable data on disease and its impact. The COVID-19 data would be retrieved using Elasticsearch. Elastic search is an open-source, free and also a search engine for all types of data such as structured and unstructured and geospatial. Elastic search was introduced in 2010 and was built on Apache Lucene. Mainly, Elastic search is a database that is used to manage, retrieve semi-structured, documented-oriented data and store the data. Using dataset from <https://www.kaggle.com/allen-institute-for-ai/CORD-19-research-challenge> for performing all the operations.

To start,

Version and tool required -

Name	Version or Tool used
OS	Ubuntu Linux&Windows (Postman, Chrome)
ElasticSearch	7.10.2
User Access	Root user or should have sudo access
Logstash	7.10
Browser	Chrome
RESTFUL	Postman
JDK	Latest Version

Data Flow :

Installation & Configuration:

Download and install the Debian package manually

```
root@amd2cd4qc:/etc# wget https://artifacts.elastic.co/downloads/elasticsearch/elasticsearch-7.10.2-amd64.deb
--2021-02-07 23:24:22-- https://artifacts.elastic.co/downloads/elasticsearch/elasticsearch-7.10.2-amd64.deb
Resolving artifacts.elastic.co (artifacts.elastic.co)... 34.120.127.130, 2600:1901:0:1d7::

Copying the metadata.csv file to logstash path /etc/logstash

Furthermore , we need to update the logstash_1.conf file with the columns & file name

```
1 # Sample Logstash configuration for creating a simple
2 # Beats -> Logstash -> Elasticsearch pipeline.
3
4 input {
5   file {
6     path => "/etc/logstash/metadata.csv"
7     start_position => "beginning"
8     sincedb_path => "/dev/null"
9   }
10 }
11
12 filter {
13   csv {
14     separator => ","
15     skip_header => "true"
16     columns =>
17       ["covid_uid", "Sha", "source_x", "title", "doi", "pmcid", "pubmed_id", "license", "publish_time", "authors", "journal", "mag_id", "who_covidence_id", "arxiv_id", "pdf_json_files", "pmc_json_files", "url", "s2_id"]
18   }
19 }
20 output {
21   elasticsearch {
22     hosts => ["http://localhost:9200"]
23     index => "covid"
24     #user => "elastic"
25     #password => "changeme"
26   }
27 }
```

Modify the file with input, filter & output

```
root@md2cd4qc:/usr/share/logstash/bin# cd /usr/share/logstash/bin/
```

```
root@md2cd4qc:/etc/logstash# cd /usr/share/logstash/bin/
root@md2cd4qc:/usr/share/logstash/bin# ./logstash -f /etc/logstash/logstash_1.conf
Using bundled JDK: /usr/share/logstash/jdk
OpenJDK 64-Bit Server VM warning: Option UseConcMarkSweepGC was deprecated in version 9.0 and will likely be removed in a future release.
```

Output:

```
    "_source" : {
      "covid_uid" : "02tnwd4m",
      "source_x" : "PMC",

```

Again, starting the logstash before that we have to delete data and index created

Using postman to delete the index

The screenshot shows a Postman interface for a DELETE request. The URL is `http://localhost:9200/covid/`. The response status is `200 OK`. The response body is `{\"acknowledged\": true}`.

```
root@md2cd4qc:/usr/share/logstash/bin# cd /usr/share/logstash/bin/
```

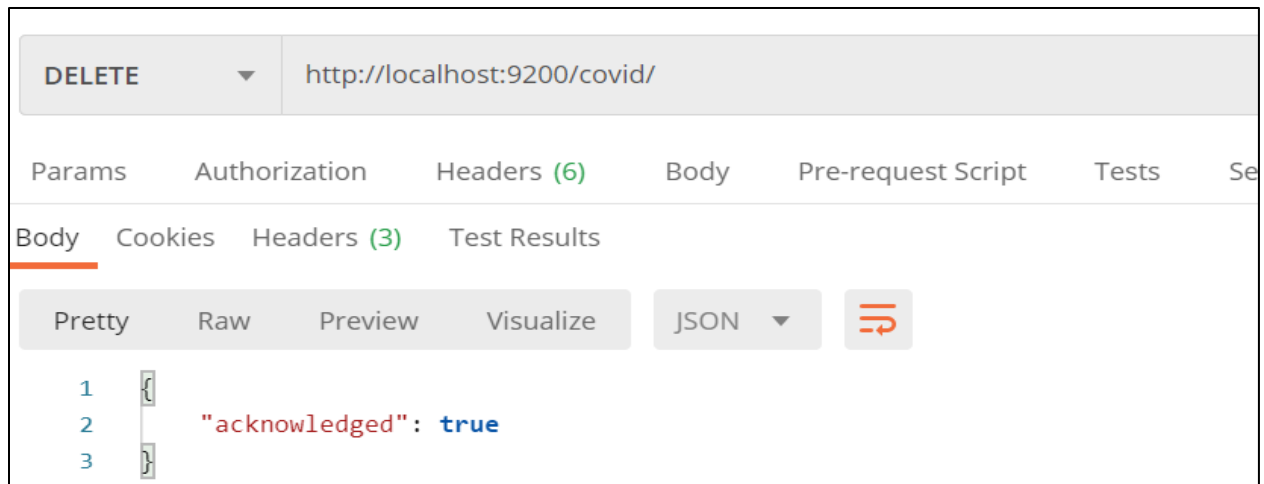

```
root@md2cd4qc:/etc/logstash# cd /usr/share/logstash/bin/
root@md2cd4qc:/usr/share/logstash/bin# ./logstash -f /etc/logstash/logstash_1.conf
Using bundled JDK: /usr/share/logstash/jdk
OpenJDK 64-Bit Server VM warning: Option UseConcMarkSweepGC was deprecated in version 9.0 and will likely be removed in a future release.
```

Using Postman updated the classic tokenizer, stopwords& stemming section

Copying the content from covid_mapping and pasting it to the Body tab then run it.

With the updated mapping file, deleting the existing index and creating the new index

Running logstash to get data with all the customization used :

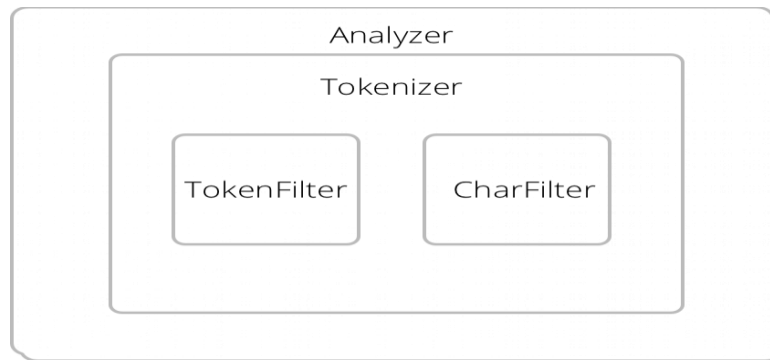

Tokenizer: Classic Tokenizer→ It is a good tokenizer for the English language which splits the words based on hyphens.

Filters: Stop words→ It removes the undesirable and useless words that are not relevant to the search index for example:

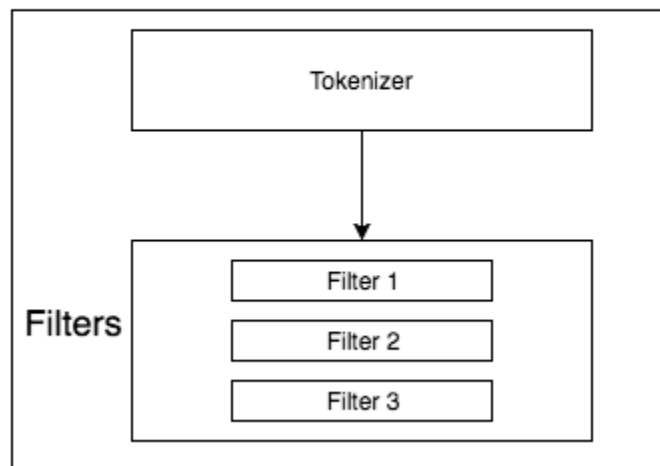

a, are, for, if, in, into, is, it, not, on, or, such, that, they, this, to, was, will etc.

Filters: Stemming → It indexes the data with a different variant of the data.

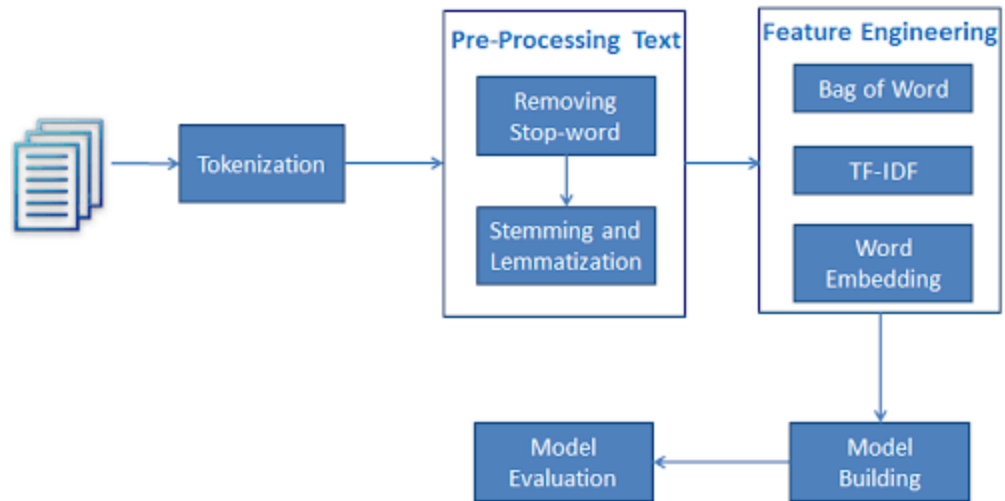

Tokenizer to Analyzer :

Analyzer

Flow diagram Analyze the sentence using analyzer:

The screenshot below shows the section for different section for Tokenizer & filters

```

4      "settings": {
5          "analysis": {
6              "analyzer": {
7                  "my_analyzer": {
8                      "tokenizer": "my_tokenizer"
9                      "filter": [ "stop", "stemmer" ]
10                 }
11             },
12             "tokenizer": {
13                 "my_tokenizer": {
14                     "type": "classic",
15                     "max_token_length": 5
16                 }
17             }
18         }
19     }

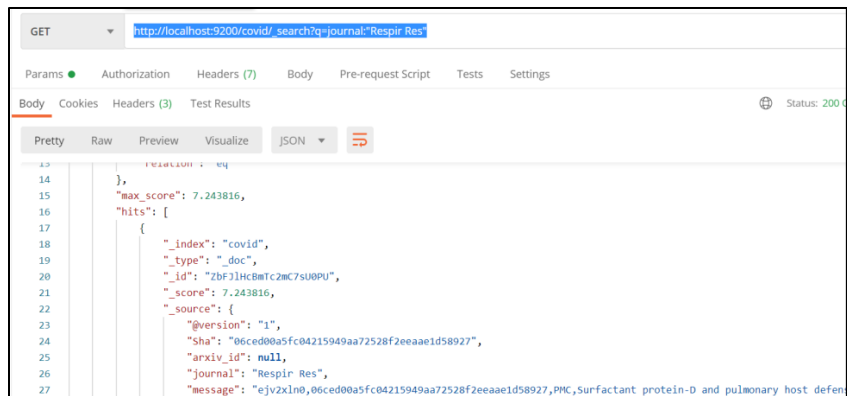

```

Searching through Postman:

1. Searching the entire content indexed using the logstash

2. Searching the field **journal** with value **Respir Res**

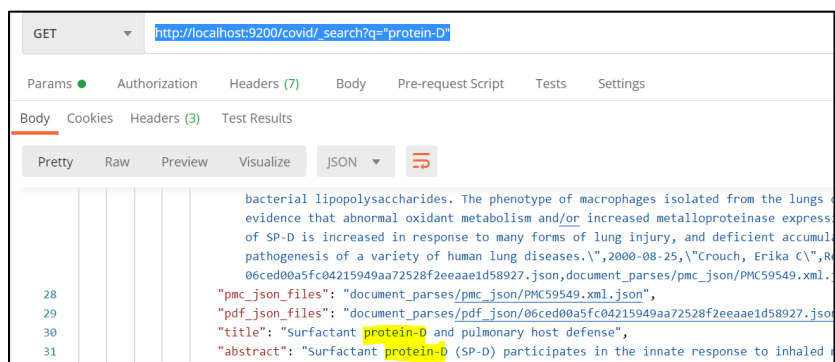

```
GET http://localhost:9200/covid/_search?q=journal:Respir Res

Params Authorization Headers (7) Body Pre-request Script Tests Settings
Body Cookies Headers (3) Test Results Status: 200 OK

      }
    }
  ]
}
```

Download the files from <https://www.kaggle.com/allen-institute-for-ai/CORD-19-research-challenge>

In that csv files in 1_population:

- Management of patients who are underhoused otherwise lower social-economic status.csv
- Methods to reach marginalized and disadvantaged population.csv
- Measures to control the spread in communities.csv
- Means of communication with target high-risk population.csv
- What are recommendations for combating resource failures_.csv
- Different ways to create hospital infrastructure to prevent nosocomial outbreaks_.csv

Copying all of the above files into Covid folder

```
root@md2cd4qc:/etc/logstash# ls
Covid  input      log4j2.properties  logstash-wiki-movies.conf  pipelines.yml  wiki_movie_plots_deduped.csv
conf.d  jvm.options  logstash-sample.conf  logstash.yml               startup.options
```

Now creating five logstash configs for each .csv file

```
root@md2cd4qc:/etc/logstash# mv logstash-wiki-movies.conf logstash_1.conf
root@md2cd4qc:/etc/logstash# cp logstash_1.conf logstash_2.conf
root@md2cd4qc:/etc/logstash# cp logstash_1.conf logstash_3.conf
root@md2cd4qc:/etc/logstash# cp logstash_1.conf logstash_4.conf
root@md2cd4qc:/etc/logstash# cp logstash_1.conf logstash_5.conf
root@md2cd4qc:/etc/logstash# ls
Covid  input      log4j2.properties  logstash.yml  logstash_2.conf  logstash_4.conf  pipelines.yml  wiki_movie_plots_deduped.csv
conf.d  jvm.options  logstash-sample.conf  logstash_1.conf  logstash_3.conf  logstash_5.conf  startup.options
```

Updated the each logstash .conf file with respective csv file and fields

Updated the each csv file with column names =>

["Date","Study","Study_Link","Journal","Study_Type","Addressed_Population","Challenge","Solution","Evidence","Added_on"]

Study_Link											
	A	B	C	D	E	F	G	H	I	J	K
1		Date	Study	Study_Link	Journal	Study_Type	Addressed	Challenge	Solution	Evidence	Added_on
2	0	#####	COVID-19	https://dc.medRxiv	Retrospec	Homeless	Evolving	C Universal	patients: 4	#####	

```
new 7 x new 2 x new 1 x wiki_movie_plots_deduped.csv x new 8 x new 9 x new 10 x logstash_5.conf x logstash_1.conf x logstash_2.conf x logstash_3.conf x logstash_4.conf x
1 # Sample Logstash configuration for creating a simple
2 # Beats -> Logstash -> Elasticsearch pipeline.
3
4 input {
5   file {
6     path => "/etc/logstash/Covid/Management of patients who are underhoused or otherwise lower social economic status.csv"
7     start_position => "beginning"
8     sincedb_path => "/dev/null"
9   }
10 }
11
12 filter {
13   csv {
14     separator => ","
15     skip_header => "true"
16     columns => ["Date", "Study", "Study_Link", "Journal", "Study_Type", "Addressed_Population", "Challenge", "Solution", "Evidence", "Added_on"]
17   }
18 }
19 output {
20   elasticsearch {
21     hosts => ["http://localhost:9200"]
22     index => "Covid"
23     #user => "elastic"
24     #password => "changeme"
25   }
26 }
27
```

Starting the Elastic using the below command.

```
root@md2cd4qc:/usr/share/logstash/bin# ^C
root@md2cd4qc:/usr/share/logstash/bin# service elasticsearch status
* elasticsearch is not running
root@md2cd4qc:/usr/share/logstash/bin# service elasticsearch start
* Starting Elasticsearch Server
root@md2cd4qc:/usr/share/logstash/bin# ./logstash -f /etc/logstash/logstash_1.conf
Using bundled JDK: /usr/share/logstash/jdk
```

Index name should to be small case

```
output {
  elasticsearch {
    hosts => ["http://localhost:9200"]
    index => "covid"
    #user => "elastic"
    #password => "changeme"
  }
}
```

All the documents are indexed properly

localhost:9200/covid/_search/?pretty=true

```

    "failed" : 0
  },

          "Study_Type" : "New England Journal of Medicine"
        }
      ]
    ]
  }
}

```

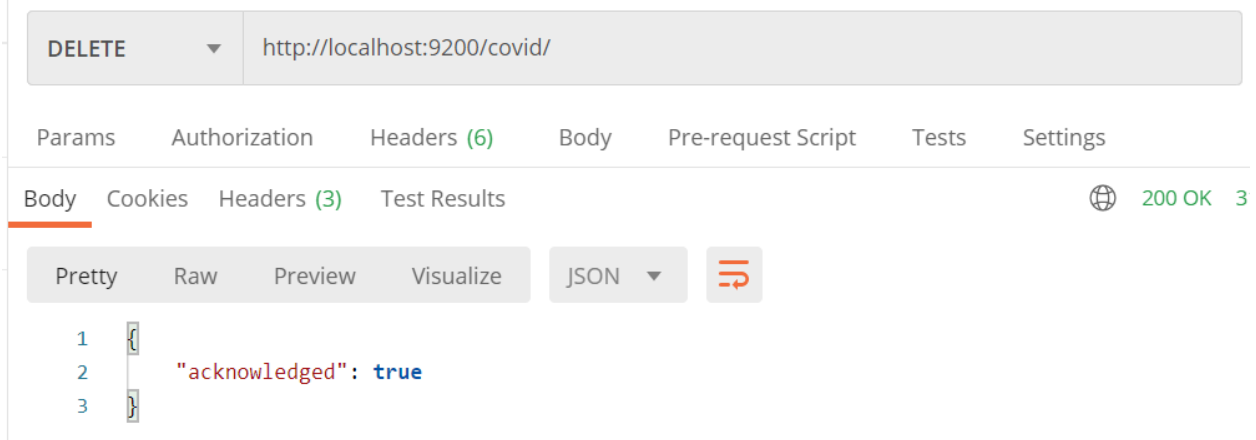

Using RESTFul Postman for checking the results

Postman interface showing a REST client request to `http://localhost:9200/covid/_search/?pretty=true`. The response is displayed in the Body tab, showing a JSON object with search results.

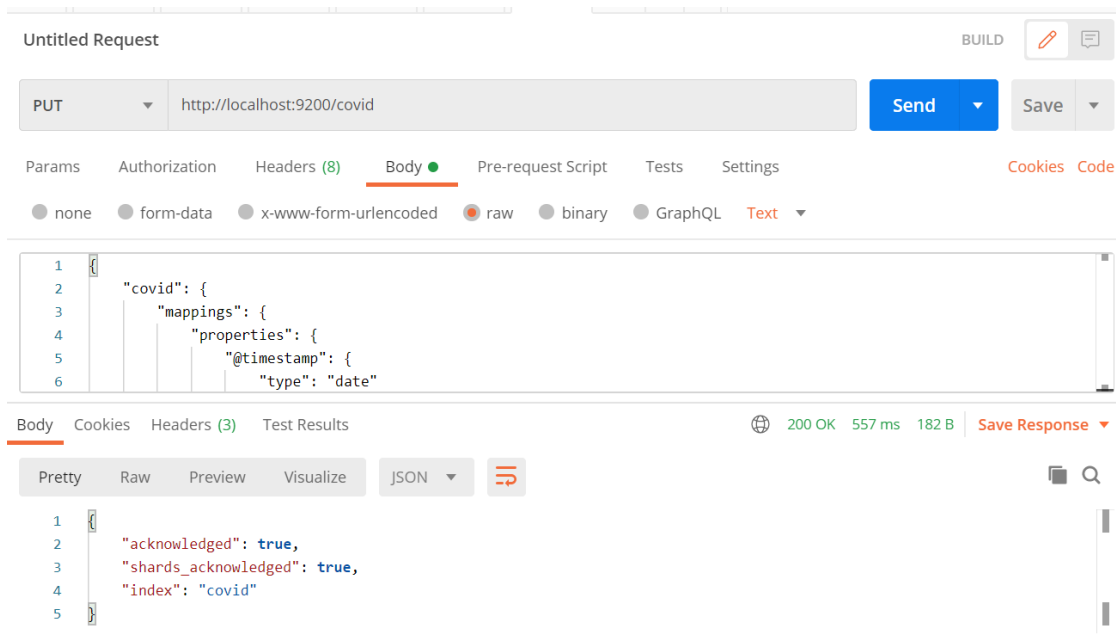

```

{
  "total": 18,
  "max_score": 1.0,
  "hits": [
    {
      "_index": "covid",
      "_type": "_doc",
      "_id": "_rGlkXcBmTc2mC7spzAV",
      "_score": 1.0,
      "_source": {
        "Study": "2020-04-02",
        "@timestamp": "2021-02-11T15:11:27.928Z",
        "host": "md2cd4qc",
        "column11": "4/22/2020",
        "Date": "7",
        "message": "7,2020-04-02,Flattening the Curve for Incarcerated Populations – Covid-19 in Jails and Prisons"
      }
    }
  ]
}

```

Copying the content from covid_mapping then paste it in Body tab then running the URL.

Now the index is created with proper mapping for date & added on

Once completed ,Run the command again to get the fresh data into Elasticsearch

```

root@md2cd4qc:/usr/share/logstash/bin# ./logstash -f /etc/logstash/logstash_1.conf
Using bundled JDK: /usr/share/logstash/jdk

```

Looks like csv file empty first column without column name for all the CSV file so I have removed it in all the files

After removing it looks like:

	A	B	C	D	E	F	G	H	I	J
